EXPERIMENT 12

Implementing Security Features and Governance / Administration Practices in Zoho Creator

Application: Recruitment & Job Application Management

Aim

To view and use the security, governance and administration features available for the Recruitment & Job Application Management application in Zoho Creator.

Procedure

1. Sign in to Zoho Creator. In the left menu of the home page, click **Operations**. The page lists Backup, Audit Trail, Domain Restriction, API Management, Logs, Support Access and other options. (Figure 1)

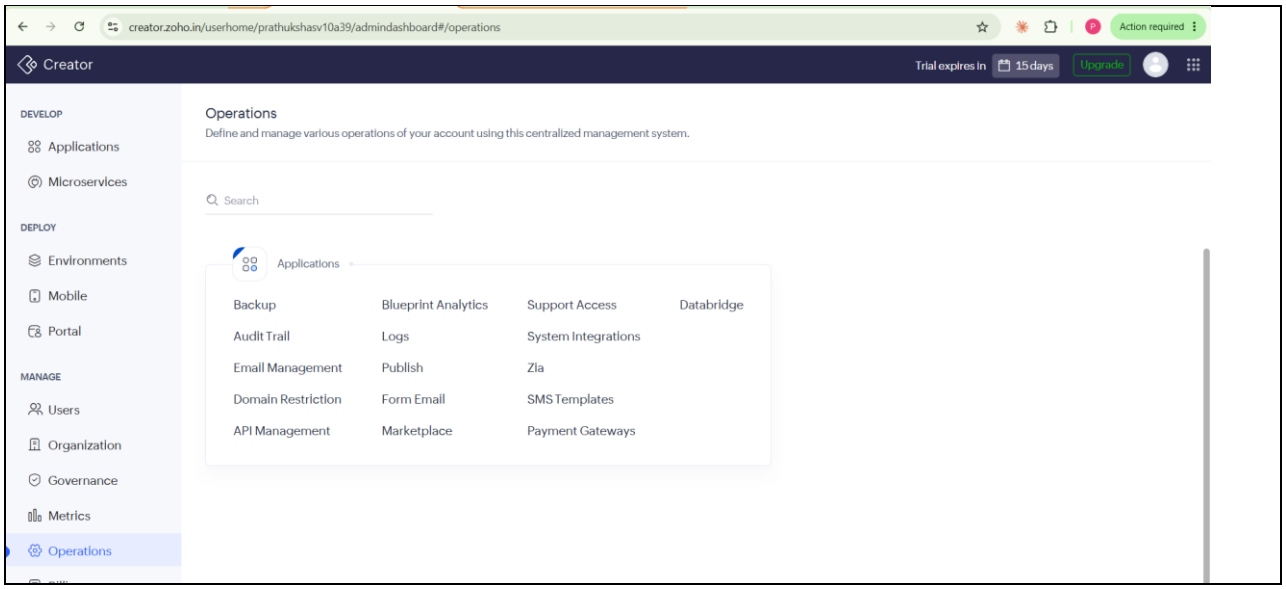

Figure 1: Operations page

2. Click **Audit Trail**. Click **Select Application** and choose **Recruitment & Job Application Management**. Select the form **Job_Application_Form**. (Figure 2)

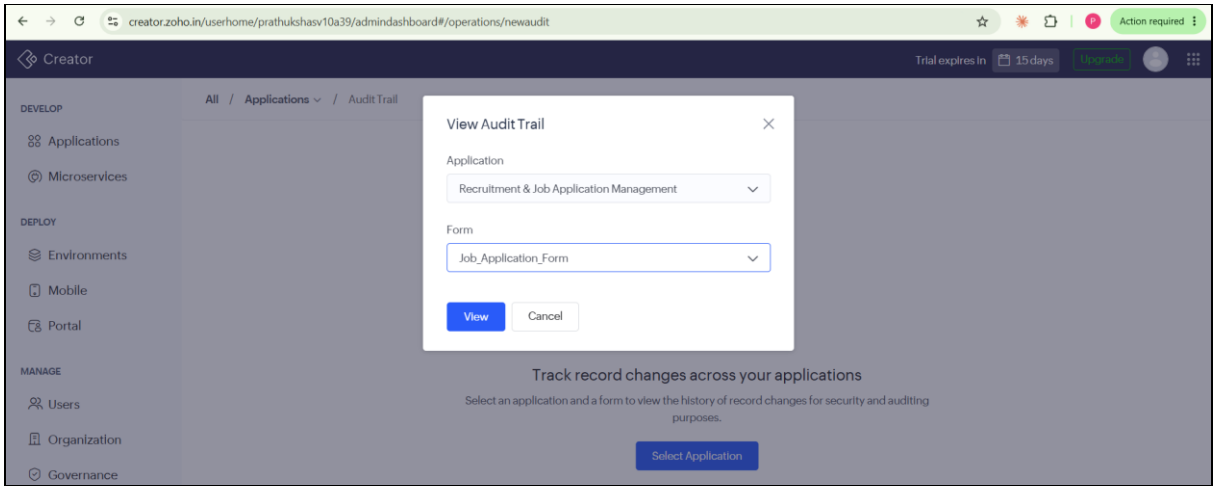

Figure 2: Audit Trail with the application and form selected

3. Go back to Operations and click **Domain Restriction**. The **User Domain Restriction** window opens with the application Recruitment & Job Application Management

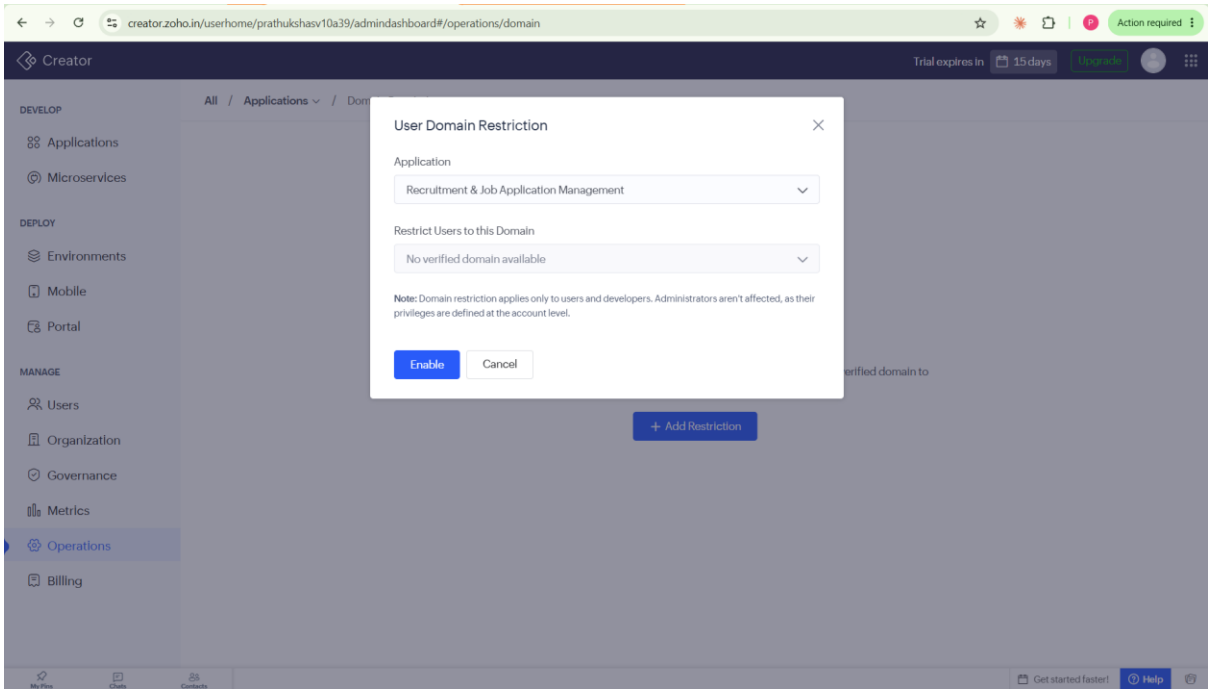

Figure 3: User Domain Restriction window showing No verified domain available

4. In the left menu click **Governance**. (Figure 4)

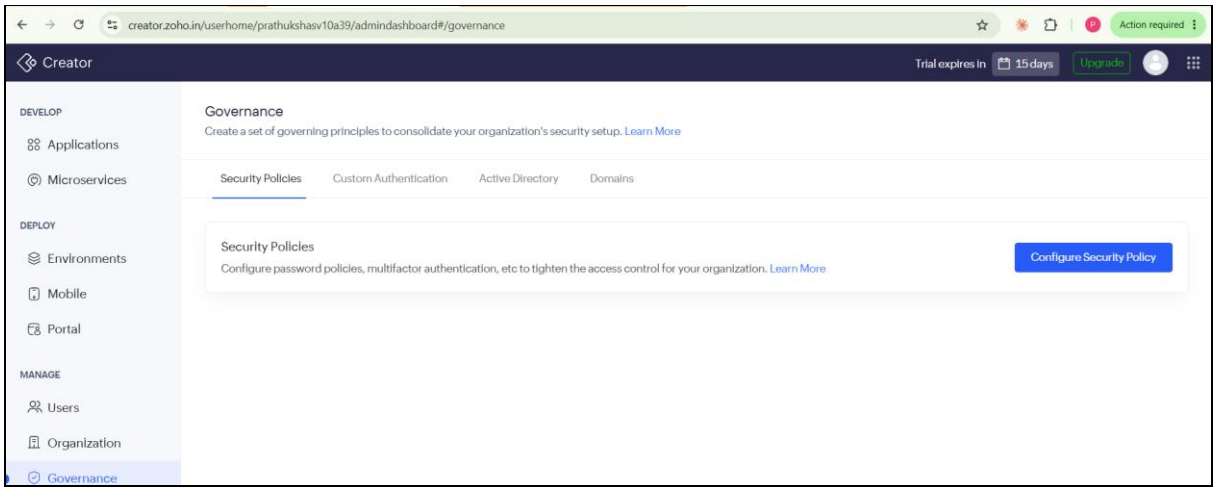

Figure 4: Governance page

5. Open the application in the builder, click the **Settings** tab and click **User Permissions**. The permission sets and roles that control access to the application are shown. (Figure 5)

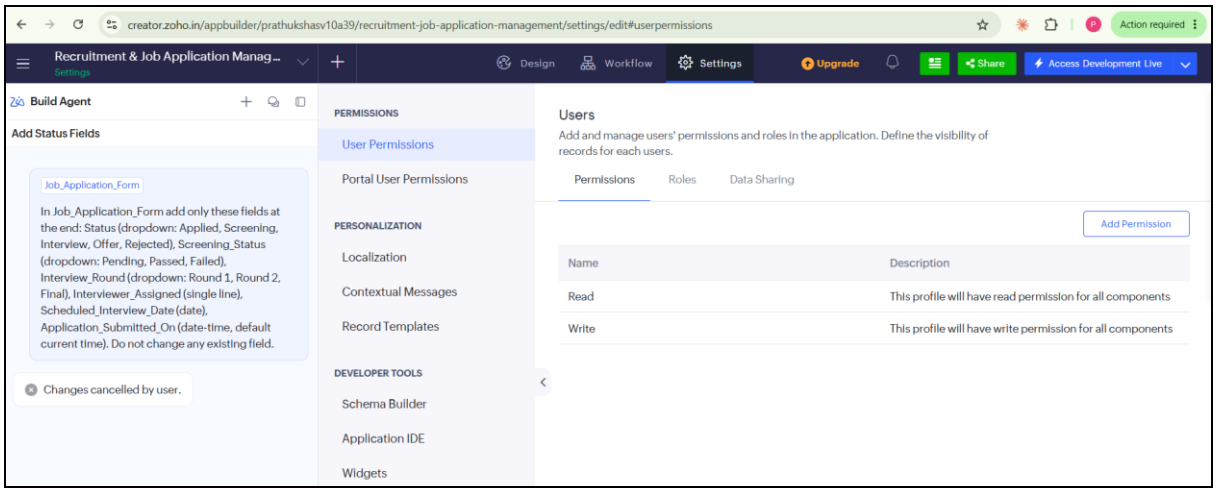

Figure 5: User Permissions page of the application

Result

The Operations page, Audit Trail, Domain Restriction, Governance and the User Permissions page of the application were opened and checked. The Audit Trail was opened for the form Job_Application_Form of the application. The Domain Restriction window showed that no verified domain is available, so domain restriction was not enabled.
