EXPERIMENT 13

Case Study on the Limitations of Low-Code Platforms for a Complex Enterprise Use Case

Application: Recruitment & Job Application Management

Aim

To study the limitations of Zoho Creator for a complex enterprise use case, using the Recruitment & Job Application Management application built in this lab.

Procedure

1. **Use case chosen:** a large company needs one recruitment system for many departments. It must collect applications, validate the data, connect to other systems, give different access to HR staff and managers, and show reports and charts to leadership.
2. **What was built:** the form Job_Application_Form with Basic Fields and a subform (Experiments 4 and 10), reports, a dashboard page and Deluge workflows (Experiments 5 and 6), and the nine report types and Environments (Experiments 11 and 12).
3. **Each requirement was tried in Zoho Creator** in the account used for the lab, and the exact message or setting shown on the screen was noted. The limits found are listed in the Result.

Result

The following limits were seen while building the application:

1. **Field settings (Experiment 4):** the Number field Years_Of_Experience only offers Max Digits and has no minimum or maximum value. The Date field Available_Joining_Date offers only Initial value and Allowed Days, with no setting to block past dates.
2. **Connections (Experiment 7):** adding a Zoho CRM connection showed the message Reached maximum connection limit, so the action could not be saved.
3. **Users and access (Experiment 8):** saving a permission set showed the profiles limit message, and saving a role showed the roles limit message.
4. **AI and analytics (Experiment 9):** Create using Zia and Metrics showed that a paid plan is needed.
5. **Domain restriction (Experiment 12):** the User Domain Restriction window showed No verified domain available, so the restriction could not be enabled.
6. **Pivot Table:** creating a Pivot Table opened the Configure Zoho Analytics window, because Pivot Table and Pivot Chart are powered by Zoho Analytics.

7. **Timeline report:** the field Application submitted on is a Time field, and the Timeline report accepted only date fields (Added Time, Available_Joining_Date, Modified Time and Scheduled Interview date), so Added Time was used.
8. **Form builder:** the Zia Build Agent could not add the new fields to the form. They were added by dragging them from the field list.
