EXPERIMENT 14

Exploring Pro-Code Extension of a Zoho Creator Application Using Custom Functions

Application: Recruitment & Job Application Management

Aim

To extend the Recruitment & Job Application Management application with code by creating a custom function in Deluge and calling it from a workflow.

Procedure

1. Sign in to Zoho Creator, open the application and click **Edit**. Click the **Workflow** tab at the top, then click the **Functions** tab.

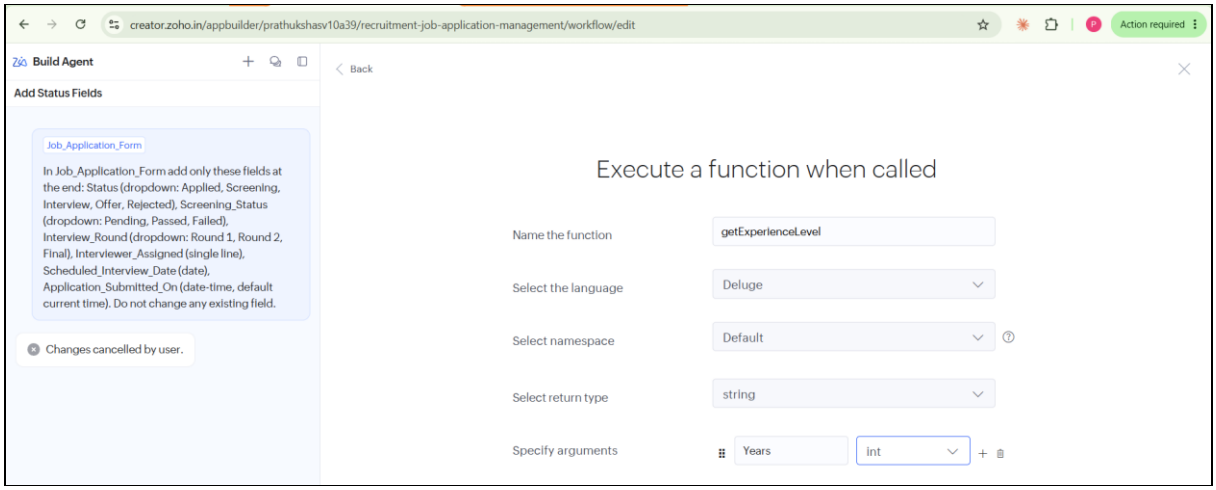

Figure 1: Functions tab in the Workflow section

2. Click **Create Function** (or **New Function**). Give the function the name **getExperienceLevel**, set the return type to **string**, and add one argument named **years** of type **int**. (Figure 2)

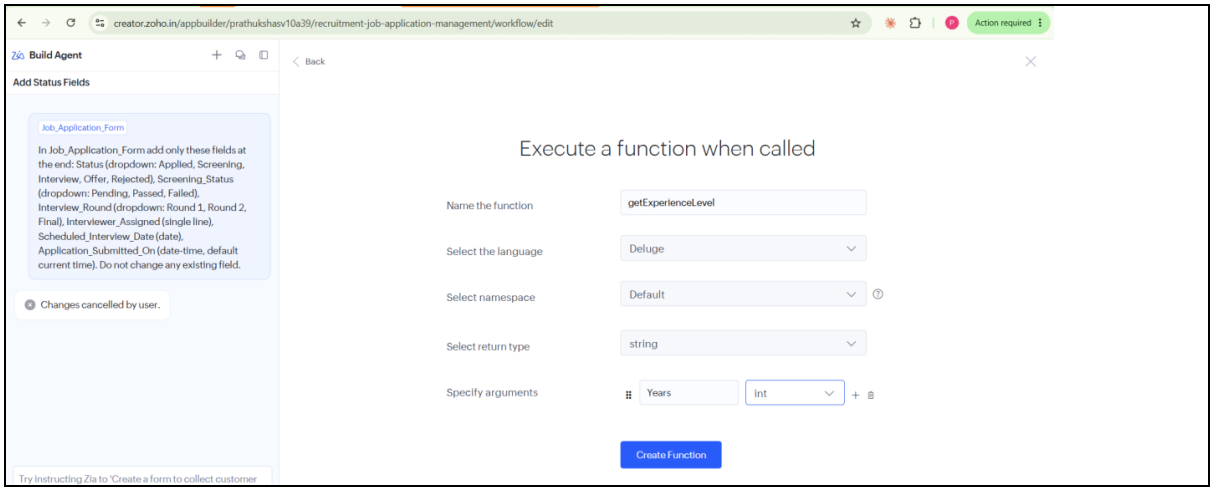

Figure 2: Function name, return type and argument

3. In the script editor, type the code below inside the function and click **Save**. The function returns Junior for less than 2 years, Mid for less than 5 years, and Senior for 5 years or more. (Figure 3)

```
level = "Senior";
if(years < 2)
{
   level = "Junior";
}
else if(years < 5)
{
   level = "Mid";
}
return level;
```

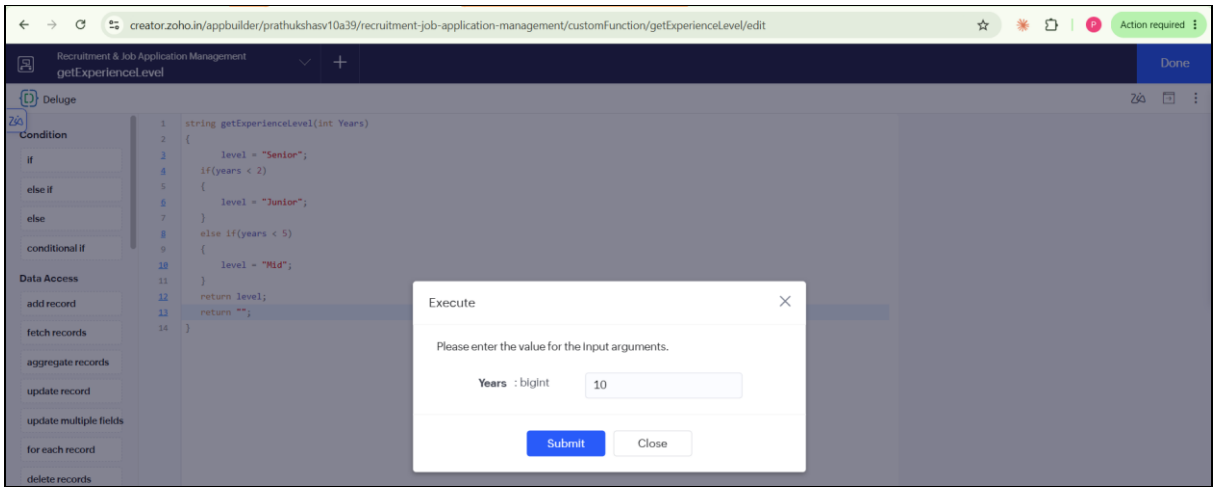

Figure 3: getExperienceLevel function saved with its script

4. Click the **Workflow** tab and open the workflow **Send_To_Zoho_Service**. Click **Add New Action**, select **Deluge script** and type the two lines below. They call the custom function. (Figure 4)

```
level = thisapp.getExperienceLevel(input.Years_Of_Experience);
info level;
```

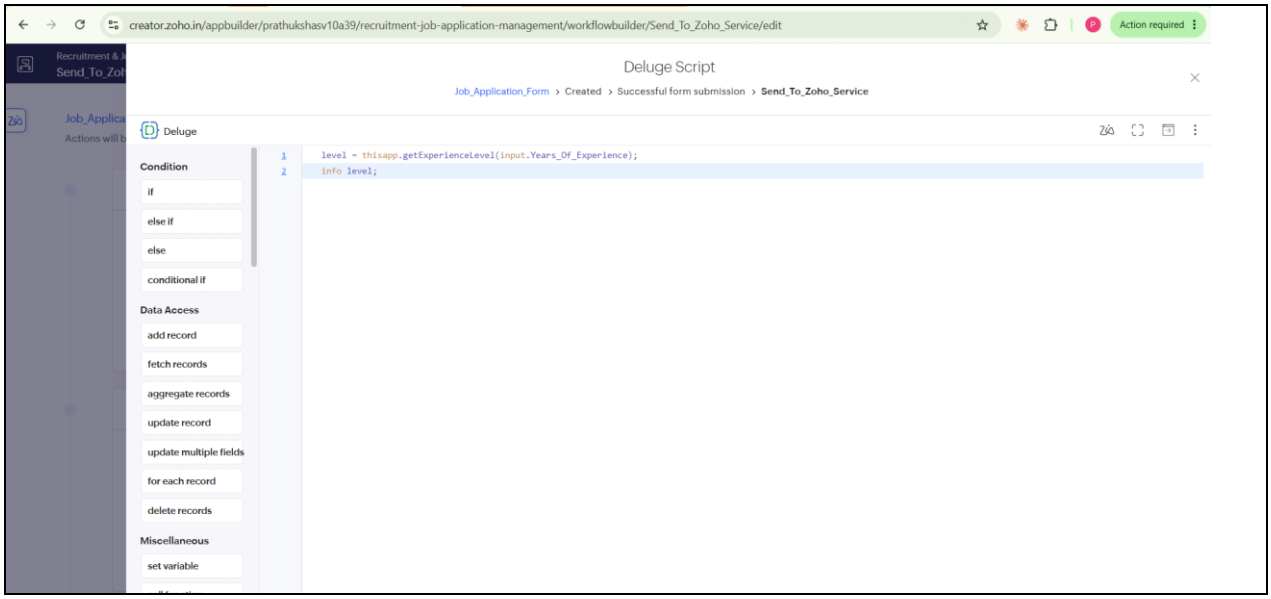

Figure 4: Custom function called in the workflow script

5. Click **Save** and then **Done**.

Result

A custom function named getExperienceLevel was created in Zoho Creator. It takes the years of experience and returns Junior, Mid or Senior. The function was called from the workflow Send_To_Zoho_Service with the field Years_Of_Experience, and the script was saved.
