EXPERIMENT 10

Applying Performance Optimization Techniques (Subforms and Query Tuning) to a Zoho Creator Application

Application: Recruitment & Job Application Management

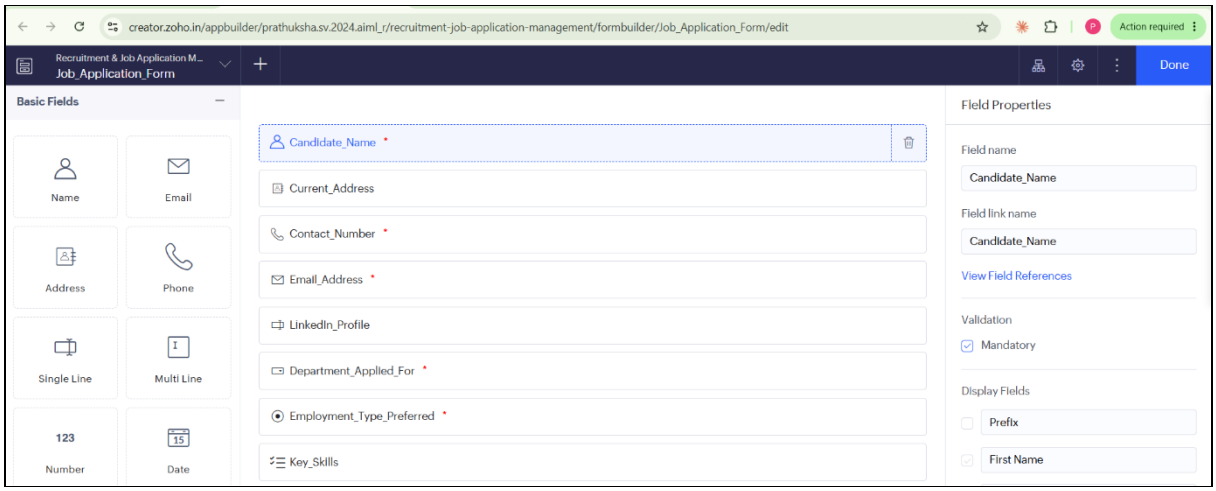

Aim

To apply performance optimization techniques, a subform for grouping related records and a tuned Deluge query that fetches only the required records, to the Recruitment & Job Application Management application.

Procedure

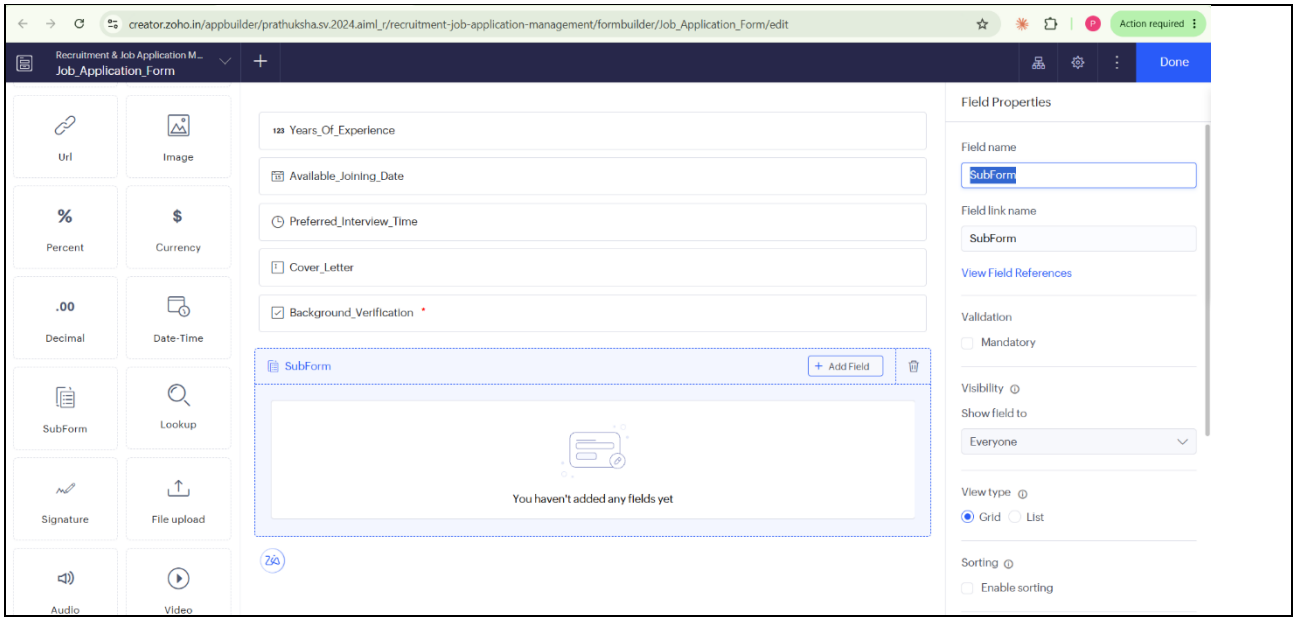

Part A: Subform

1. Sign in to Zoho Creator, open the application Recruitment & Job Application Management and click **Edit**. Click the **Settings** tab, click **Application IDE** under Developer Tools, and click **Open Builder** at the top left. The form builder of Job_Application_Form opens.

Form builder of Job_Application_Form

2. In the field list on the left, scroll down to **SubForm**. It is below Date-Time, next to Lookup. Drag it onto the form below the last field

SubForm added to the form

3. Click the subform. In Field Properties on the right, change the Field name to **Work_History**. Drag **Single Line** into the subform and name it **Company_Name**. Drag **Number** into the subform and name it **Years_Worked**. (Figure 3)

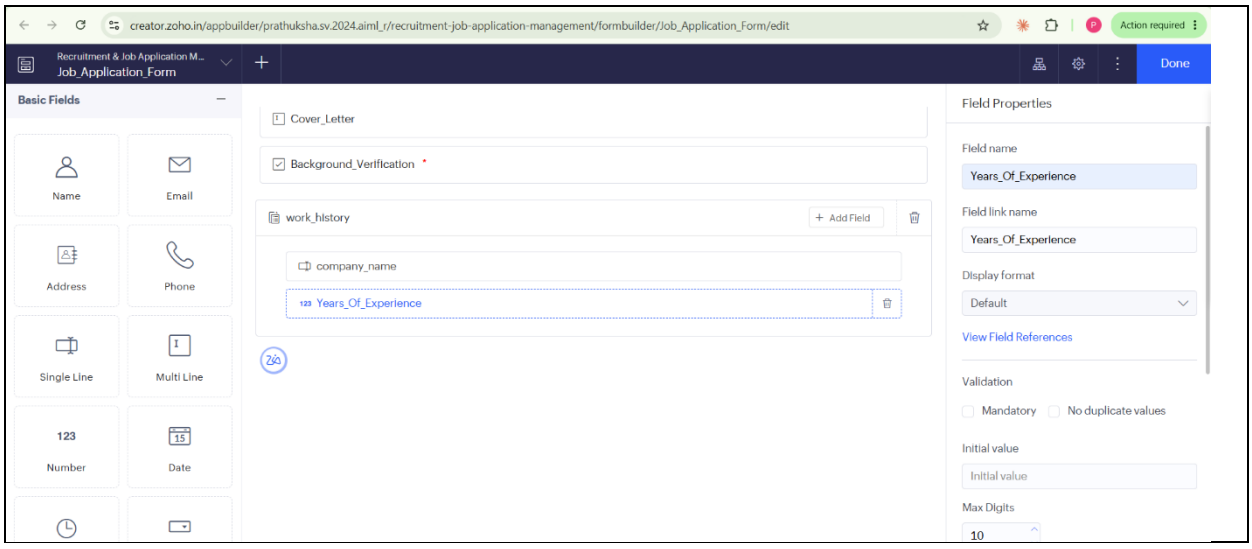

Figure 3: Work_History subform with its fields

4. Click **Done** at the top right to save the form.

Part B: Tuned Deluge query

5. Go back to the application and click the **Workflow** tab. Open the workflow **Send_To_Zoho_Service**, click **Add New Action**, select **Deluge script** and type the

script below. The criteria Years_Of_Experience > 2 fetches only the matching records, and range from 1 to 10 limits the result to 10 records instead of fetching all records.

```
candidates = Job_Application_Form[Years_Of_Experience > 2] range from 1 to 10;
info candidates.count();
```

6. Click **Save** and then **Done**. (Figure 4)

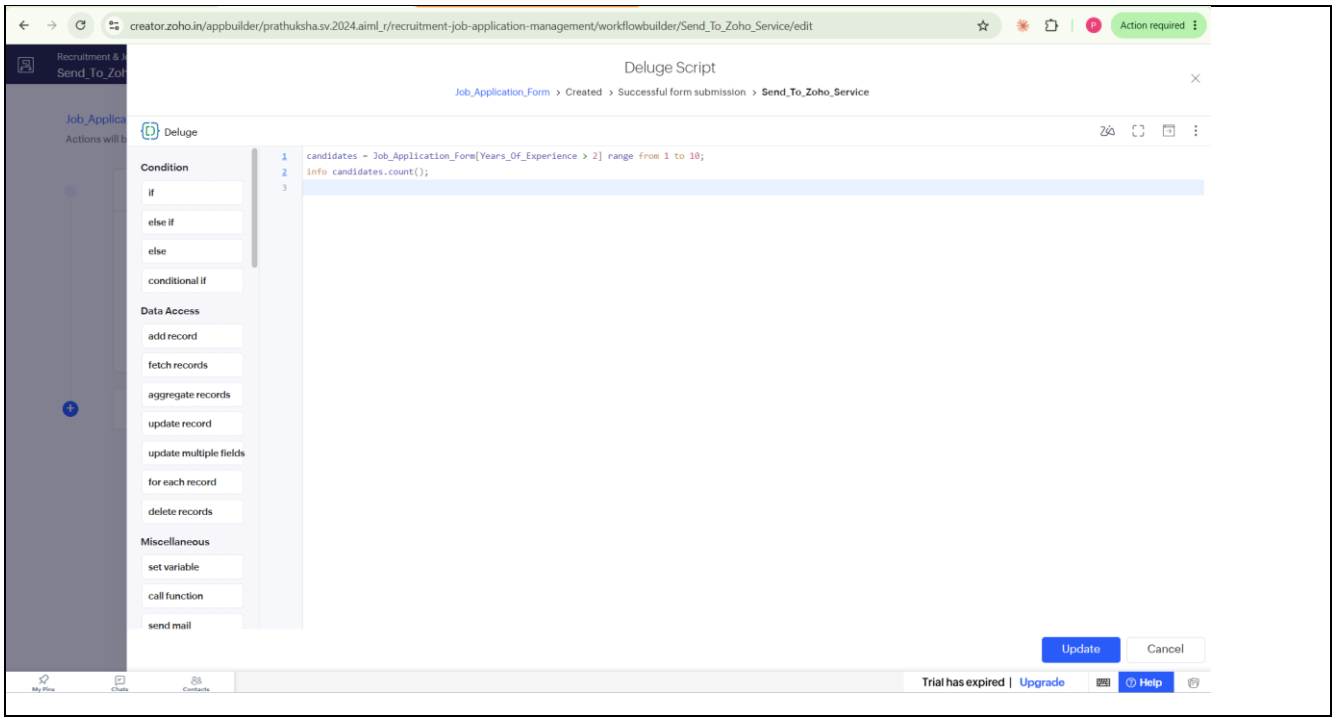

Figure 4: Tuned Deluge query saved in the workflow

Result

A subform named Work_History with the fields Company_Name and Years_Worked was added to Job_Application_Form. A Deluge query that fetches only the records with Years_Of_Experience greater than 2, limited to 10 records, was added to the workflow Send_To_Zoho_Service and saved.
